

This is an example PDF-A.

Notes for PDF-A:

- You should always use a 'Custom' Font and the font should exist in the Windows Font directory so it can be embedded into the PDF. In this example, it is set to Arial.
- Set the 'PDF Type' of PDF Details to 'PDF\_A\_1b'. In this example, it is already set.
- Encryption is not allowed on PDF-A so the boolean should always be false (default: false).
- Transparent Images are not allowed so do not attempt to watermark PDF-A documents.
- As transparent images are not allowed, PNG images are not allowed (but JPG/BMP/WMF are allowed)
- If running an evaluation version of the PDF Toolkit, this example will not run as PDF-A is not supported in the evaluation version.
